CAREER SUMMARY

Software engineer with 3+ years of diverse work experience and proficiency in cutting-edge tools and frameworks. My love of software development has led me to work on dynamic and complex projects. I am eager to apply my passion for elegant applications to a dynamic team.

WORK EXPERIENCE

Software Developer/Engineer
Code The Dream (remote)
March 2022- Present

- Developed responsive web application using effective code developing and debugging methods, increasing code quality by 18%.
- Built RESTful APIs that served data to front-end based on dynamic input by user that served 10000 concurrent requests.
- Improved database performance by utilizing Mongoose library, boosting query response times by 10% and reduced code clutter by 15%.
- Utilized OpenAI's API to develop an AI based learning application that can produce tailored and personalized learning experience for users.

Software Developer Apprentice
Cisco Systems, Inc. / Trilyon Services

- Developed dependable and scalable front-end solutions using Harbor Components' capabilities with ReactJS and TypeScript, resulting in a recognizable and understandable user experience, that would facilitate easier hardware provision for millions of users.
- Created testing components using Cypress testing libraries to implement thorough testing methodologies to guarantee the application's stable functionality and high-quality code.
- Collaborated with a highly geographically diverse team to ensure timely project delivery while adhering to best practices resulting in 25% faster code delivery.

EDUCATION

B.S.
